1 Introduction

1.1 Revision History

Table 1-1 Revision history

Version	Date	Author	Remark
v0.1_p1	2015/01/05	Wei Cheng Lin	1. Original Release.

1.2 General Information

This document serves as a reference to the design works of products that will be manufactured by UMC using the following process.

UMC 0.11 um Logic and Mixed-Mode AI Advanced Enhancement Process

For more information about this process and technology, please see the electrical design rule listed below.

G-02-LOGIC/MIXED_MODE11-1P8M-MMC/AL/L110AE-EDR

The creation, verification, and usage of the compact model of the following devices are presented in this document.

Figure 1-1 BJT Layout of NPN

1.3 Model Usage

The compact model is provided in various formats. It should be noted that the model has been verified on different simulators of the specific versions listed below and the simulation results from other versions of simulator might be different.

Synopsys HSPICE release 2013.3SP2
Cadence SPECTRE version 13.1.0.066
Mentor Graphics ELDO version 6.11_1.1

To cope with the impact of process variations on circuit performance, worst-case models are provided along with the typical case and they are listed below.

TT: Typical BJT model
FF: Fast BJT model (Maximum Beta model)
SS: Slow BJT model (Minimum Beta model)

Follow these steps to invoke the model file during simulation.

For Synopsys HSPICE

- Copy ModelFileName.mdl and ModelFileName.lib into your simulation directory.
- Add the following statement in the input file to the simulator.
.lib "/ModelFileName.lib" CaseName
, where CaseName could be TT, FF, SS.

For Cadence Spectre

- Copy ModelFileName.mdl.scs and ModelFileName.lib.scs into your simulation directory.
- Add the following statement in the input file to the simulator.
include "/ModelFileName.lib.scs" section=CaseName
, where CaseName could be TT, FF, or SS.

For Mentor Graphics Eldo

- Copy ModelFileName.mdl.eldo and ModelFileName.lib.eldo into your simulation directory.
- Add the following statement in the input file to the simulator.
.lib "/ModelFileName.lib.eldo" CaseName
, where CaseName could be TT, FF, SS.

As stated above that BJT model is provided and this model is valid as the following geometry, and temperature ranges. Device behavior beyond these ranges may not be well described by the model and is not guaranteed.

Geometry description:

Table 1-2 Vertical BJT device

Vertical NPN	npn_sv45x45_ L110AE	npn_sv90x90_ L110AE	npn_sv135x135_ L110AE
Emitter Area	4.5X4.5 μm^2	9X9 μm^2	13.5X13.5 μm^2
Base Area	11.7X11.7 μm^2	16.2X16.2 μm^2	20.7X20.7 μm^2
SAB (Salicide Block) overlap diffusion	Yes	Yes	Yes

Temperature range:

-40 °C ~ +150 °C

2 NPN BJT Model Verification

2.1 Silicon Wafer For Modeling

The information of the silicon wafer used for characterization and model parameter extraction is summarized in the table below.

Table 2-1 Test wafer information for BJT

	BJT NPN model
Mask ID	BSW0QA-A0
Lot ID	D58YR.1
Wafer Number	03

2.2 Measurement Conditions

The model is verified to measurement data under following bias condition

Gummel Plot:

Table 2-2 Gummel Plot measurement condition of NPN

Gummel Plot			
	Start	Stop	Step
$V_{BE}(V)$	0.1	1.0	0.01
$V_{CB}(V)$	1	1	1

Output characteristics:

Table 2-3 Output characteristic measurement conditions of NPN

Output Characteristics			
	Start	Stop	Step
$V_{CE}(V)$	0	3.3	0.033
$I_B(\mu A)$	1	5	1

Gummel-Poon model has its essential inaccuracy in reverse region, because this model does not have a parameter for the reverse saturation current. Hence, it uses the forward saturation current for both forward and reverse region. In addition, the base resistance parameters (R_B , R_{BM}) were extracted from the forward base current. That is the reason that the reverse base current is not modeled well at high current level.

2.3 NPN_SV45X45_L110AE Model Verification

2.3.1 NPN_SV45X45_L110AE model verification at 25 °C
